Space is limited! Register today!

To register call 513-315-3038 or go to: www.aboutstryker.com/seminars

Get AroundKnee[™] | stryker[®]

Total knee replacement is intended for use in individuals with joint disease resulting from degenerative, rheumatoid, and post-traumatic arthritis, and for moderate deformity of the knee. As with any surgery, knee replacement surgery has serious risks which include, but are not limited to, blood clots, stroke, heart attack, and death. Implant related risks which may lead to a revision include dislocation, loosening, fracture, nerve damage, heterotopic bone formation (abnormal bone growth in tissue), wear of the implant, metal sensitivity, soft tissue imbalance, osteolysis (localized progressive bone loss), and reaction to particle debris. The information presented is for educational purposes only. Knee implants may not provide the same feel or performance characteristics experienced with a normal healthy joint. Speak to your doctor to decide if joint replacement surgery is appropriate for you. Individual results vary and not all patients will return to the same activity level. The lifetime of any device is limited and depends on several factors like weight and activity level. Your doctor will help counsel you about strategies to potentially prolong the lifetime of the device, including avoiding high-impact activities, such as running, as well as maintaining a healthy weight. Ask your doctor if the GetAroundKnee is right for you. Stryker Corporation or its divisions or other corporate affiliated entities own, use or have applied for the following trademarks or service marks: GetAroundKnee, Stryker.
